DETAILED ACTION

1. The drawings are objected to because figure 3 shows two separate figures with one designation. The figures either should be bracketed with one figure designation or there should be two figure designations, one for each figure. Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is unduly broad, incomplete and thus inoperable because it is not clear how could the claimed driving circuit possibly drive an output/load circuit when the

Art Unit: 2674

claimed amplification part is turned off. It appears that a feedback/bypass circuitry, as claimed in claims 2-5, is needed in order for the claimed invention to be complete and thus operable under 35 USC 112. Correction and/or clarification is required.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Nagatomo(6,236,195B1).

Nagatomo discloses a voltage driving circuit for correcting voltage variations or offsets thereby correctly matching the voltage of the output signal with the voltage of the input signal comprising a differential voltage amplifier(2) having a high input impedance and a low output impedance(column 2, lines 33-42; column 3, lines 44-52), a differential input part(1), an output part(3), a feedback circuit(connection of the output(3) of the differential amplifier(2) to its inverted input(see figures 1 and 3-7)), a bypass control means and operation control means(10a, 10b; see figures 1 and 3-7) having a switch, a switch control means(11a, 11b) and a constant current source(21) which all function as claimed.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Itakura et al(5,343,089), Buck and Itakura(6,456,270B1) are

Art Unit: 2674

made of record to show various types of driving circuits for driving a load having variation or offset correction circuitry.
